

Hydro-Zone's Water Management will
Save Water and Energy Costs while

EFFICIENCY LOSS DUE TO SCALE DEPOSITS

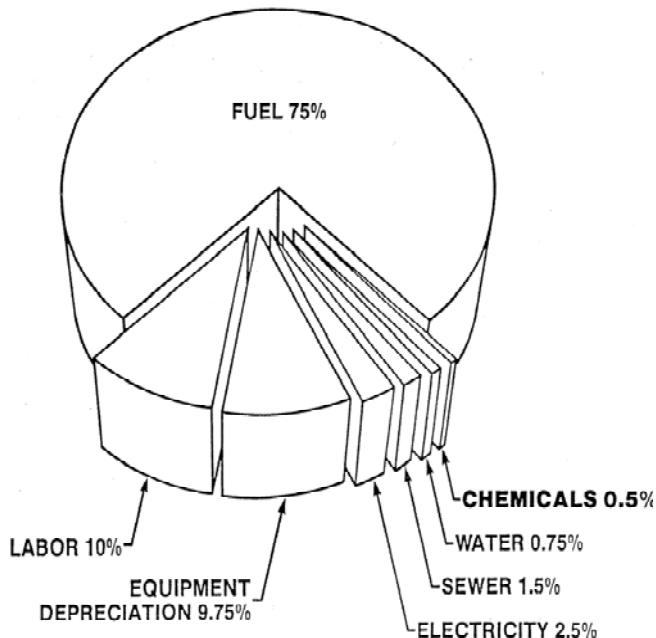

Providing Solutions

Our Water Treatment Technical Service Representatives have the training and expertise to address potential problems and

Hydro-Zone Water Treatment Programs

- **Boiler Systems**
- **Feedwater Systems**
- **Condensate Systems**
- **Heat Exchangers**
- **Hot Water Systems**
- **Water Conservation**
- **Energy Conservation**
- **Personnel Training**

Water quality is critical to your process. As your Water Management Consultant, Hydro-Zone will provide you with the knowledge and technology to keep your facility operating at maximum potential.

- **Heating Systems** -- Our Boiler Water Treatment incorporates the latest polymers available to ensure clean heat transfer surfaces, as well as, protect the entire system from the damaging effects of corrosion. Softener Elution studies, Condensate Profiles, Boiler Logs are all part of maintaining a Boiler System.
- **Condensate Systems** — Our condensate treatment varies for each system. A condensate profile must be performed by our trained personnel to evaluate the best treatment for the system.
- **Hot Water Systems** — Our technology will assure low corrosion and no pitting of the system while maintaining clean heat transfer surfaces.
- **Chemical Feed and Control Systems** -- Our Controller Systems are designed around your application to assure consistent control of your Water Treatment Program. Our remote access Controller Systems provide the latest technology for System Management.
- **Operator Training** — Boiler maintenance and water chemistry personnel training can assure the system is operating at 100% efficiency.
- **Low Environmental Impact**— Our products contain technology designed for minimal environmental impact and to conform to environmental compliance standards.
